

5 material forming the sheet in a first portion
of the sheet;

a second portion of the sheet where material comprising the sheet is removed; and

whereas a folding of the sheet to create a first fold line in a first direction parallel to the second portion, then folding the sheet in a second direction perpendicular to the first direction to create a second fold line causes the second portion to collapse causing the first portion to come into an abutting relationship along the first and second fold lines which creates an abutment.

2. The sheet according to claim 1 wherein the
20 second portion is surrounded by the first portion.

3. The sheet according to claim 1, which includes a plurality of first portions and second portions.

25 4. The sheet according to claim 3, wherein the
second portions are surrounded by first portions.

cont

~~6. The sheet according to claim 5, wherein said abutment is seamed by welding, thermal bonding or adhesive bonding.~~

5 7. The sheet according to claim 1, wherein the folding takes place at a junction formed between the first portion and the second portion.

SUB
A3

10 8. A method of making a sheet for forming a structure having a three dimensional shape comprising the steps of:

forming the sheet to create a first portion of the sheet with sheet material;

15 forming an second portion of the sheet without sheet material; and

folding said sheet in such a manner so as to collapse the second portion by causing the second portion to come into alignment with itself.

20 9. The method according to claim 8 which includes the step of forming the sheet with the second portion surrounded by the first portion.

10. The method according to claim 8, which
25 includes the step of forming the sheet with a plurality of first portions and second portions.

11. The method according to claim 10, which
30 includes the step of forming the sheet with the second portions surrounded by first portions.

~~12. The method in accordance with claim 8, wherein the folding of the sheet occurs in a first~~

5

~~13. The method in accordance with claim 12,
wherein the folding takes place at a junction
formed between the first portion and the second
portion.~~

10

14. The method in accordance with claim 12, which includes the step of seaming the abutment.

15 15. The method according to claim 14, wherein
seaming is done by welding, thermal bonding or
adhesive bonding.
